

# Mobile Mark's Verizon Frontline Verified Antennas

In emergency response, reliable connectivity starts with the right antenna. Mobile Mark's Verizon Frontline Verified antennas have been evaluated for public safety use on Verizon's network and are designed for vehicles, command units, and critical infrastructure where dependable communications matter most.

Reliable RF performance starts here.

### Multi-Technology Connectivity

Supports cellular, Wi-Fi, and GNSS technologies across verified antenna platforms to simplify public safety communications deployments.

### Flexible Installation Options

Available in vehicle-mounted, low-profile, and infrastructure-ready form factors to support varied operational and installation requirements.

### Built for Demanding Environments

Designed for real-world field conditions where vibration, exposure, mobility, and installation constraints can impact wireless performance.

### MXG900 Series

Low-Profile MaxFin Platform for Advanced Fleet Connectivity

- 4x 5G/LTE MIMO cellular support
- Up to 5x Wi-Fi 6E/7 support
- Integrated GPS/GNSS positioning
- Low-profile MaxFin design
- Supports broadband communications, AVL, and fleet connectivity

### LTMWG900 Series

High-Capacity Surface-Mount Platform for Multi-Radio Vehicles

- 4x 5G/LTE MIMO cellular support
- Up to 4x Wi-Fi 6E support
- Integrated GNSS positioning
- Surface-mount multiband platform
- Ideal for dual-carrier MIMO and high-data vehicle deployments

### LLPG08 Series

Ultra-Low-Profile Platform for Compact Installations

- 2x 5G/LTE MIMO cellular support
- Up to 4x Wi-Fi support
- Integrated GNSS positioning
- Ultra-low-profile enclosure
- Suitable for mobile and fixed-site deployments

### MXFG08 Series

Slim MaxFin Platform for Space-Constrained Vehicle Rooftops

- 2x 5G/LTE MIMO cellular support
- Up to 5x Wi-Fi support
- Integrated GNSS positioning
- Slim MaxFin housing
- Designed for roof-rib and space-constrained installations
