Mobile Mark's Engineering Technical Center provides a wide range of Electrical, Mechanical and Environmental testing services.

We have the ability to run a wide range of testing based on industrial & military standards. Our equipment can be used to test for Shock & Vibration standards including:

IEEE1478, EN61373, EN300-019, MIL-810G, TIA 329.2-C, IEC 60068, and SAE J1455.

IEEE 1478

Standard for Environmental Conditions for Transit Rail Car Electronic Equipment: Conditions include: temperature, humidity, atmospheric pressure, water, corrosive elements, and vibration/shock. These conditions depend upon equipment location such as under car, interior, truck mounted, and carbody mounted.

EN 300-019

Environmental conditions and environmental tests for telecommunications equipment.

TIA 329.2-C

The test conditions, and methods of measurement of vehicular antennas in the Land Mobile Services are presented for establishing conformance to the performance requirements.

SAE J1455

The recommended set of specifications for electronic equipment associated with the automotive market and is critical for testing both on- and off-road vehicles as well as heavy trucks.

EN61373

The requirements for testing items of equipment intended for use on railway vehicles which are subsequently subjected to vibrations and shock owing to the nature of railway operational environment.

MIL-810G

United States Military Standard that emphasizes tailoring an equipment's environmental design and test limits to the conditions that it will experience throughout its service life, and establishing chamber test methods that replicate the effects of environments on the equipment rather than imitating the environments themselves.

IEC 60068

a collection of methods for environmental testing of electronic equipment and products to assess their ability to perform under environmental conditions including extreme cold and dry heat.

We also have the ability to test for Water, Salt, Fog and Dust ingress standards that fall within the full range of Ingress Protection (IP) ratings. **IPX7** (dust) and **IP67** (water ingress) are some of the more common ratings we test for.

Mobile Mark offers cable assemblies and mounts to make antenna installation easier. Custom cable assemblies are built to order with a variety of styles and connectors available. Cable assemblies can be used for site antennas with integrated connectors or to extend a standard mobile antenna configuration when longer runs are needed.

RG-174 Custom Cable Assemblies

RG-174: Very small (approx. 0.1"/2.5 mm) flexible cable best suited for mobile/portable applications up to 1900 MHz. It can be used in short runs up to 2.7 GHz. For miniature sized connectors it has the widest options available.

LMR-100A Custom Cable Assemblies

LMR-100A: Low Loss alternative for RG-174. It has the same size diameter (0.1 inch or 2.5 mm) and can be used with the same range of connectors. The cable is well shielded but is still flexible and easy to handle.

RG-58 Custom Cable Assemblies

RG-58: Work horse cable and is suitable for applications up to 2.7 GHz. It is best suited for cable runs under approximately 20ft (6 meters).

LL-195 Custom Cable Assemblies

LL-195: Same size cable as RG-58, and uses the same size connectors, with the added feature of lower cable losses. Low Loss-195 would be suitable for cable runs over 15 ft (4.5 meters) or in high frequency applications up to 6 GHz. This is our standard cable for applications above 2.5 GHz.

LL-195FR (Flame Retardant) Flame Retardant Custom Cable Assemblies

LL-195FR: Non-halogen (non-toxic), low smoke, fire retardant cable. It has the same diameter as LL-195, can be fitted with the same variety of connectors, and has the same cable loss.

LMR-240 Custom Cable Assemblies

LMR-240: Lower loss cable than LL-195 and best suited for longer cable runs from 20 ft - 50 ft (6 meters - 15 meters) as well as for higher frequency applications up to 6 GHz or more.

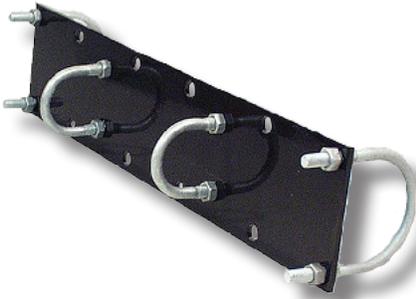

LL-400 Custom Cable Assemblies

LMR-400: Suitable for long runs & higher frequency applications. Approximately 0.405" diameter (10 mm), it might be too large for some mobile installs, but is perfect for every base station transmitter or access point.

LL-600 Custom Cable Assemblies

LMR-600: The lowest loss cable we offer. It is a premium low loss cable. Approximately 0.600" diameter (15mm) and It is suitable for base station installations where the antenna may be mounted on a tower with long runs of cable.
